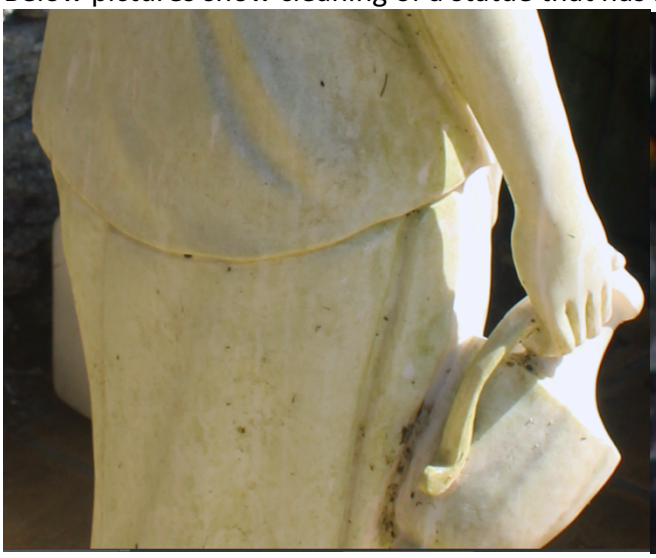
Cleaning of Marble Resin Statues

Items recommended for cleaning.

* It is recommended when cleaning that appropriate PPE is used and follow manufacturers instructions.

Below pictures show cleaning of a statue that has been outside for several years without previous cleaning.



Our products can be cleaned as and when using a warm/hot soapy solution. For more stubborn stains we use a spray with bleach (we use Flash) available from most supermarkets. Spray on the bleach solution, leave for 10-15 mins.

After 15 minutes you should start to see the cleaner working. If there are any more stubborn marks that may wish to be tackled, these can be removed using a stainless steel scourer as shown in below pictures. Rinse well with water.
